

PRESTATIEVERKLARING

fischer 
innovative solutions

Nr. 0007 – NL

1. Unieke identificatiecode van het producttype: **injectiesysteem fischer FIS V**

2. Beoogd(e) gebruik(en):

Product	Beoogd gebruik
Metalen ankers voor gebruik in beton (zware lasten)	Voor bevestigen van constructieve elementen of veiligheidsrelevante onderdelen zoals verlaagde plafonds aan beton, zie bijlage, in het bijzonder bijlagen B 1 tot en met B 8

3. Fabrikant: **fischerwerke GmbH & Co. KG, Otto-Hahn-Straße 15, 79211 Denzlingen, Duitsland**

4. Gemachtigde: --

5. Het systeem of de systemen voor de beoordeling en verificatie van de prestatiebestendigheid: **1**

6a. Geharmoniseerde norm: ---

Aangemelde instantie(s): ---

6b. Europees beoordelingsdocument: **ETAG 001; 2013-04**Europese technische beoordeling: **ETA-02/0024; 2015-01-07**Technische beoordelingsinstantie: **DIBt**Aangemelde instantie(s): **1343 – MPA Darmstadt**

7. Aangegeven prestatie(s):

Mechanische weerstand en stabiliteit (BWR 1)

Essentieel kenmerk	Prestatie
Karakteristieke weerstand voor ontwerp volgens TR 029	Zie bijlage, in het bijzonder bijlagen C 1 tot en met C 6
Karakteristieke weerstand voor ontwerp volgens CEN/TS 1992-4:2009	Zie bijlage, in het bijzonder bijlagen C 7 tot en met C 12
Verplaatsingen ten gevolge van trek en afschuif krachten	Zie bijlage, in het bijzonder bijlagen C 13, C 14

Veiligheid bij brand (BWR 2)

Essentieel kenmerk	Prestatie
Brandgedrag	Verankeringen voldoen aan de vereisten voor klasse A1
Brand weerstand	Geen prestatie bepaald (NPD)

8. Geëigende technische documentatie en/of specifieke technische documentatie: ---

De prestaties van het hierboven omschreven product zijn conform de aangegeven prestaties. Deze prestatieverklaring wordt in overeenstemming met Verordening (EU) nr. 305/2011 onder de exclusieve verantwoordelijkheid van de hierboven vermelde fabrikant verstrekt.

Ondertekend voor en namens de fabrikant door:

Andreas Bucher, Dipl.-Ing.

Wolfgang Hengesbach, Dipl.-Ing., Dipl.-Wirtsch.-Ing.

Tumlingen, 2015-02-05

- Deze prestatieverklaring is opgesteld in verschillende talen. Bij een geschil over de interpretatie prevaleert de engelse versie.
- De bijlage bevat vrijwillige en aanvullende informatie in de Engelse taal boven op de (taal-neutraal gespecificeerde) wettelijke voorschriften.

Specific Part

1 Technical description of the product

The fischer injection system FIS V is a bonded anchor consisting of a cartridge with injection mortar fischer FIS V and a steel element. The steel element consist of

- a fischer threaded rod FIS A or RGM of sizes M6 to M30 or
- a internal threaded anchor RG MI of sizes M8 to M20 or
- a deformed reinforcing bar of sizes $\phi = 8$ to 28 mm or
- a fischer rebar anchor FRA of sizes M12 to M24

The steel element is placed into a drilled hole filled with injection mortar and is anchored via the bond between metal part, injection mortar and concrete.

The product description is given in Annex A.

2 Specification of the intended use in accordance with the applicable European Assessment Document

The performances given in Section 3 are only valid if the anchor is used in compliance with the specifications and conditions given in Annex B.

The verifications and assessment methods on which this European Technical Assessment is based lead to the assumption of a working life of the anchor of at least 50 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

3 Performance of the product and references to the methods used for its assessment

3.1 Mechanical resistance and stability (BWR 1)

Essential characteristic	Performance
Characteristic resistance for design according to TR 029	See Annex C 1 to C 6
Characteristic resistance for design according to CEN/TS 1992-4:2009	See Annex C 7 to C 12
Displacements under tension and shear loads	See Annex C 13 / C 14

3.2 Safety in case of fire (BWR 2)

Essential characteristic	Performance
Reaction to fire	Anchorages satisfy requirements for Class A1
Resistance to fire	No performance determined (NPD)

3.3 Hygiene, health and the environment (BWR 3)

Regarding dangerous substances there may be requirements (e.g. transposed European legislation and national laws, regulations and administrative provisions) applicable to the products falling within the scope of this European Technical Assessment. In order to meet the provisions of Regulation (EU) No 305/2011, these requirements need also to be complied with, when and where they apply.

3.4 Safety in use (BWR 4)

The essential characteristics regarding Safety in use are included under the Basic Works Requirement Mechanical resistance and stability.

3.5 Protection against noise (BWR 5)

Not applicable.

3.6 Energy economy and heat retention (BWR 6)

Not applicable.

3.7 Sustainable use of natural resources (BWR 7)

The sustainable use of natural resources was not investigated.

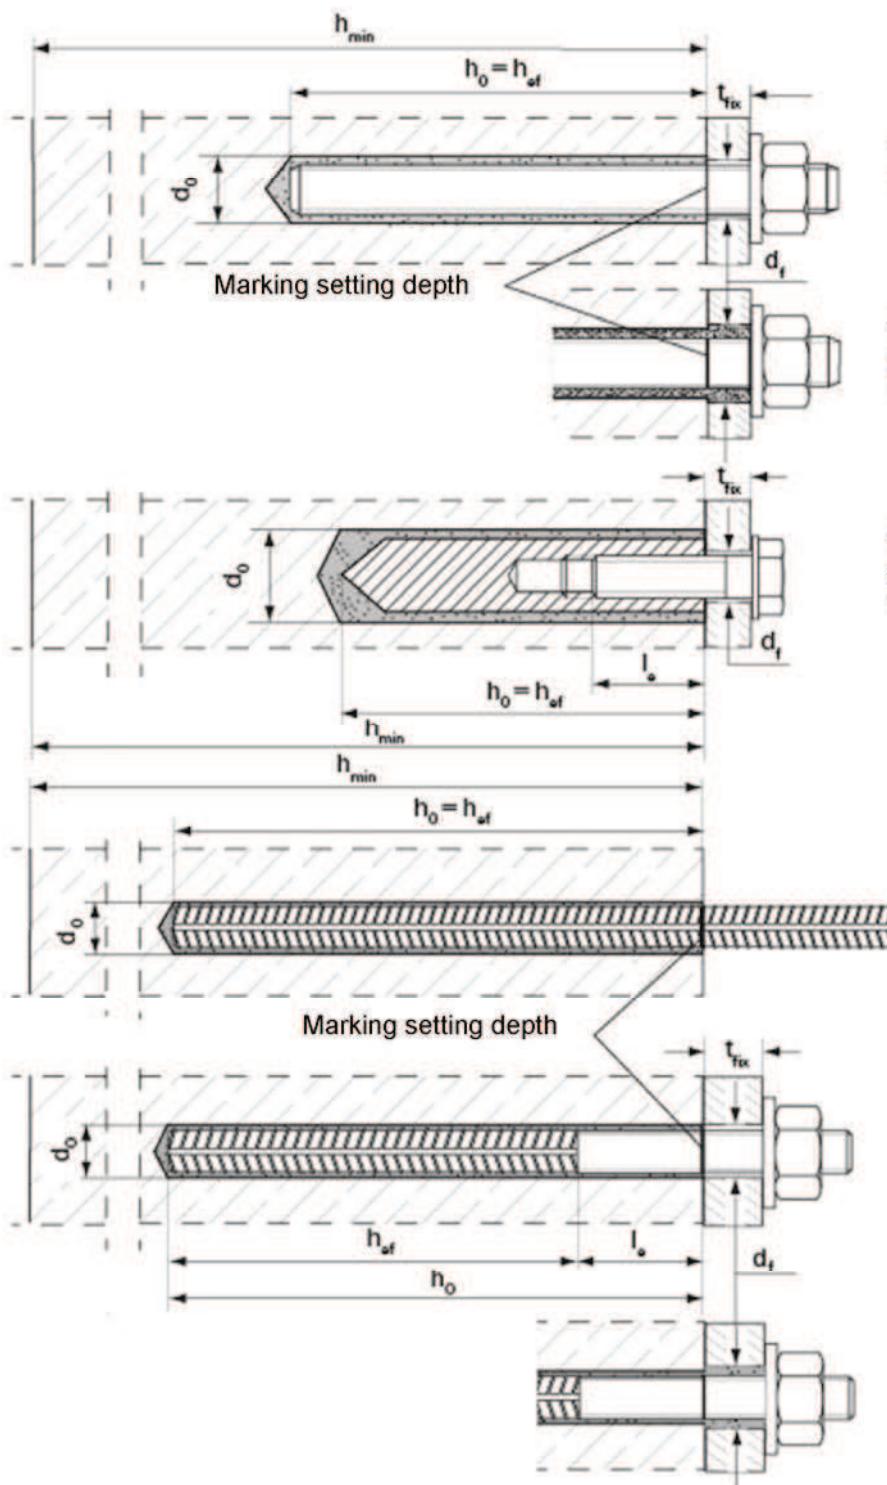

3.8 General aspects

The verification of durability is part of testing the essential characteristics. Durability is only ensured if the specifications of intended use according to Annex B are taken into account.

4 Assessment and verification of constancy of performance (AVCP) system applied, with reference to its legal base

According to Decision of the Commission of 24 June 1996 (96/582/EC) (OJ L 254 of 08.10.96 p. 62-65), the system of assessment and verification of constancy of performance (see Annex V and Article 65 Paragraph 2 to Regulation (EU) No 305/2011) given in the following table applies.

Product	Intended use	Level or class	System
Metal anchors for use in concrete (heavy-duty type)	For fixing and/or supporting concrete structural elements or heavy units such as cladding and suspended ceilings	—	1

Installation condition**fischer injection system FIS V**

	Temperature range II	-40°C to +120°C		(max. long term temperature +72°C and max. short term temperature +120°C)								

Base materials:

- Reinforced or unreinforced normal weight concrete according to EN 206:2013
- Strength classes C20/25 to C50/60 according to EN 206:2013

Use conditions (Environmental conditions):

- Structures subject to dry internal conditions
(zinc coated steel, stainless steel or high corrosion resistant steel)
- Structures subject to external atmospheric exposure (including industrial and marine environment) and to permanently damp internal condition, if no particular aggressive conditions exist
(stainless steel or high corrosion resistant steel)
- Structures subject to external atmospheric exposure and to permanently damp internal condition, if other particular aggressive conditions (high corrosion resistant steel)
Note: Particular aggressive conditions are e.g. permanent, alternating immersion in seawater or the splash zone of seawater, chloride atmosphere of indoor swimming pools or atmosphere with extreme chemical pollution (e.g. in desulphurization plants or road tunnels where de-icing materials are used).

Design:

- Anchorages have to be designed under the responsibility of an engineer experienced in anchorages and concrete work.
- Verifiable calculation notes and drawings are prepared taking account of the loads to be anchored. The position of the anchor is indicated on the design drawings (e.g. position of the anchor relative to reinforcement or to supports, etc.).
- Anchorages under static or quasi-static actions are designed in accordance with TR 029 "Design of bonded anchors", Edition September 2010 or CEN/TS 1992-4:2009

Installation:

- Anchor installation carried out by appropriately qualified personnel and under the supervision of the person responsible for technical matters of the site.

¹⁾ Both drill bit diameters can be used.

Reinforcing bar

Properties of reinforcement: refer to EN 1992-1-1 Annex C, Table C.1 and C.2N

Product form		Non-zink-plated bars and decoiled rod	
Class		B	C
Characteristic yield strength f_{yk} or $f_{0,2k}$ [MPa]		400 to 600	
Minimum value of $k = (f_t/f_{yk})$		$\geq 1,08$	$\geq 1,15$ $< 1,35$
Characteristic strain at maximum force ε_{uk} [%]		$\geq 5,0$	$\geq 7,5$
Bentability property		Bend / Rebendtest	
Maximum deviation from nominal mass (individual bar) [%]	Nominal bar size [mm]	≤ 8	$\pm 6,0$
		> 8	$\pm 4,5$
Bond: Minimum relative rib area, $f_{R,min}$ (determination acc. to EN 15630)	Nominal bar size [mm]	8 to 12	0,040
		> 12	0,056

Rib height h :

The rib height h must be: $0,05 * d \leq h \leq 0,07 * d$ d = nominal bar size

>+30	to	+40		35	30	+40		2	4

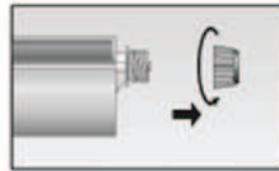

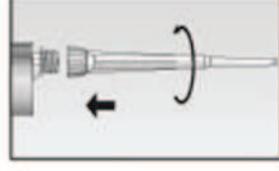

¹⁾ For wet concrete or flooded hole the curing time must be doubled.

Installation instructions part 1

Drilling and cleaning the hole

1		Drill the hole. Drill hole diameter d_0 and drill hole depth h_0 see Tables B2, B3, B4, B5.	
2		$h_{ef} \leq 12d$ and $d_0 < 18$ mm: Blow out the drill hole four times by hand. 	$h_{ef} > 12d$ and/or $d_0 \geq 18$ mm: Blow out the drill hole four times, using oil-free pressure air ($p > 6$ bar).
3		Brush the drill hole four times using an adequate steel brush (see Table B6).	
4		$h_{ef} \leq 12d$ and $d_0 < 18$ mm: Blow out the drill hole four times by hand. 	$h_{ef} > 12d$ and/or $d_0 \geq 18$ mm: Blow out the drill hole four times, using oil-free pressure air ($p > 6$ bar).

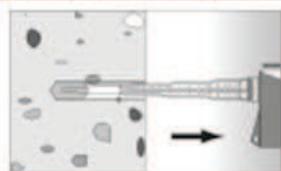

Preparing the cartridge

5		Twist off the sealing cap.
6		Twist on the static mixer (the spiral in the static mixer must be clearly visible).
7		Place the cartridge into the dispenser.
8		Press out approx. 10 cm of mortar until the resin is permanent grey in colour. Mortar which is not grey in colour will not cure and must be disposed of.

fischer injection system FIS V

Intended Use
Installation instructions part 1

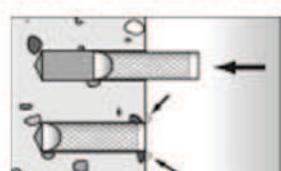

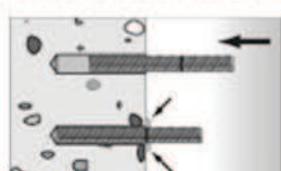

Annex B 7

Installation instructions part 2**Injection of the mortar****9**

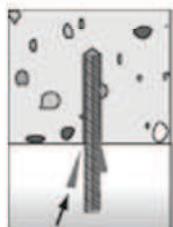

Fill approx... 2/3 of the drill hole with mortar. Always begin from the bottom of the hole to eliminate voids.

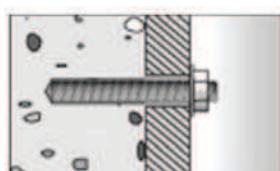

For drill hole depth ≥ 150 mm use an extension tube.

Installation fischer anchor rods or internal threaded anchors RG MI**10**

Only use clean and oil-free anchor elements. Press the anchor rod or internal threaded anchor RG MI down to the bottom of the hole, turning it slightly while doing so. After inserting the anchor element, excess mortar must emerge around the anchor element.

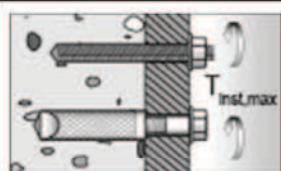

For overhead installation support the anchor element with wedges.

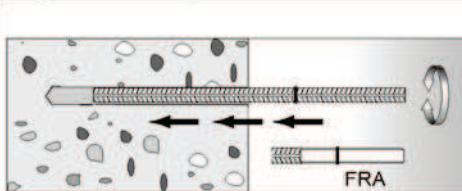

For push-through installation fill the annular gap also with mortar.

11

Wait for the specified curing time
 t_{cure} see Table B7.

12

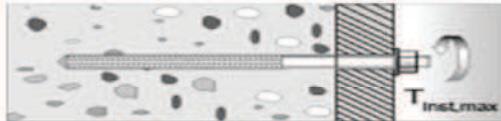

Mounting the fixture
 $T_{inst,max}$ see Tables B2 or B3

Installing reinforcing bars and fischer rebar anchors FRA**10**

Only use clean and oil-free rebars. Mark the reinforcing bar for setting depth. Using a turning movement, push the reinforcing bar or FRA vigorously into the filled hole up to the insertion depth marking. When reaching the setting depth marking surplus mortar must emerge around the anchor.

11

Wait for the specified curing time
 t_{cure} see Table B7.

12

Mounting the fixture
 $T_{inst,max}$ see Table B5

fischer injection system FIS V**Intended Use**

Characteristic values of resistance for threaded rods and internal threaded anchors RG MI under shear loads (Design according to CEN/TS 1992-4)

**Table C15: Characteristic values of resistance for reinforcing bars under shear loads
(Design according to CEN/TS 1992-4)**

Size	\emptyset	[mm]	8	10	12	14	16	20	25	28
Installation safety factor	γ_{inst}	[-]					1,0			
Steel failure without lever arm										
Characteristic resistance	$V_{Rk,s}$	[kN]					0,5 $A_s \times f_{uk}$			
Ductility factor acc. to CEN/TS 1992-4-5:2009 Section 6.3.2.1	k_2	[-]					0,8			
Characteristic resistance	$M_{Rk,s}^0$	[Nm]					1,2 $\times W_{el} \times f_{uk}$			
Concrete prout failure										
Factor in equation of CEN/TS 1992-4-5:2009 Section 6.3.3	k_3	[-]					2,0			
Concrete edge failure										
Outside diameter of anchor	d_{nom}	[mm]	8	10	12	14	16	20	25	28

**Table C16: Characteristic values of resistance for rebar anchors FRA under shear loads
(Design according to CEN/TS 1992-4)**

Size			M12	M16	M20	M24
Installation safety factor	γ_{inst}	[-]			1,0	
Steel failure without lever arm						
Characteristic resistance	$V_{Rk,s}$	[kN]	30	55	86	124
Partial safety factor	$\gamma_{Ms,V}^{1)}$	[-]			1,56	
Ductility factor acc. to CEN/TS 1992-4-5:2009 Section 6.3.2.1	k_2	[-]			0,8	
Steel failure with lever arm						
Characteristic resistance	$M_{Rk,s}^0$	[Nm]	92	233	454	785
Partial safety factor	$\gamma_{Ms,V}^{1)}$	[-]			1,56	
Concrete prout failure						
Factor in equation of CEN/TS 1992-4-5, Section 6.3.3	k_3	[-]			2,0	
Concrete edge failure						
Outside diameter of anchor	d_{nom}	[mm]	12	16	20	24
